

Visual Studio Code interface showing the `GameManager.cs` file. The code defines a `GameManager` class that inherits from `MonoBehaviour`. It includes properties for `targets`, `spawnRate`, `score`, and `scoreText`. The `Start` method initializes the score and starts a coroutine `SpawnTarget`. The `Update` method calls `SpawnTarget` once per frame. The `SpawnTarget` coroutine yields for `spawnRate` seconds, then randomly selects a target and instantiates it.

```
1 using System.Collections;
2 using System.Collections.Generic;
3 using UnityEngine;
4 using TMPro;
5
6 public class GameManager : MonoBehaviour
7 {
8     public List<GameObject> targets;
9     public GameObject[] targets2;
10    private float spawnRate = 1.0f;
11
12    private int score;
13    private TextMeshProUGUI scoreText;
14
15    // Start is called before the first frame update
16    void Start()
17    {
18        StartCoroutine(SpawnTarget());
19        score = 0;
20        scoreText.text = "Score" + score;
21    }
22
23    // Update is called once per frame
24    void Update()
25    {
26    }
27
28    IEnumerator SpawnTarget()
29    {
30        while (true)
31        {
32            yield return new WaitForSeconds(spawnRate);
33            int index = Random.Range(0, targets.Count);
34            Instantiate(targets[index]);
35        }
36    }
```

The `Update` method calls `SpawnTarget` once per frame. The `SpawnTarget` coroutine yields for `spawnRate` seconds, then randomly selects a target and instantiates it. The `UpdateScore` method is also defined to update the score and the `scoreText` display.

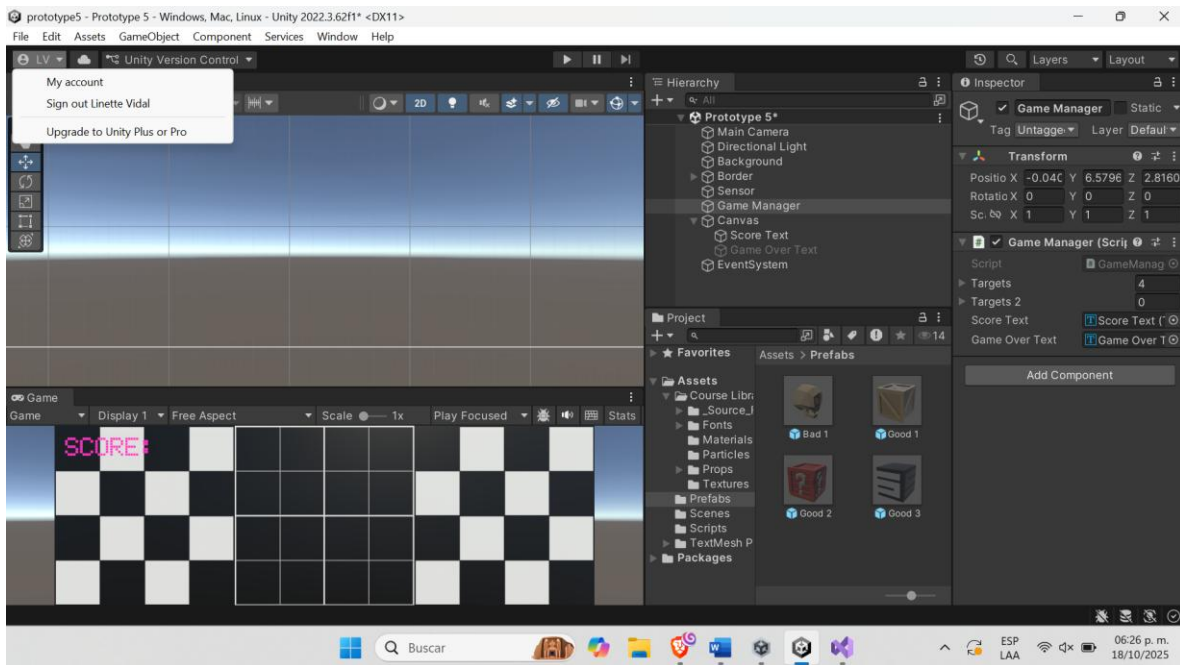

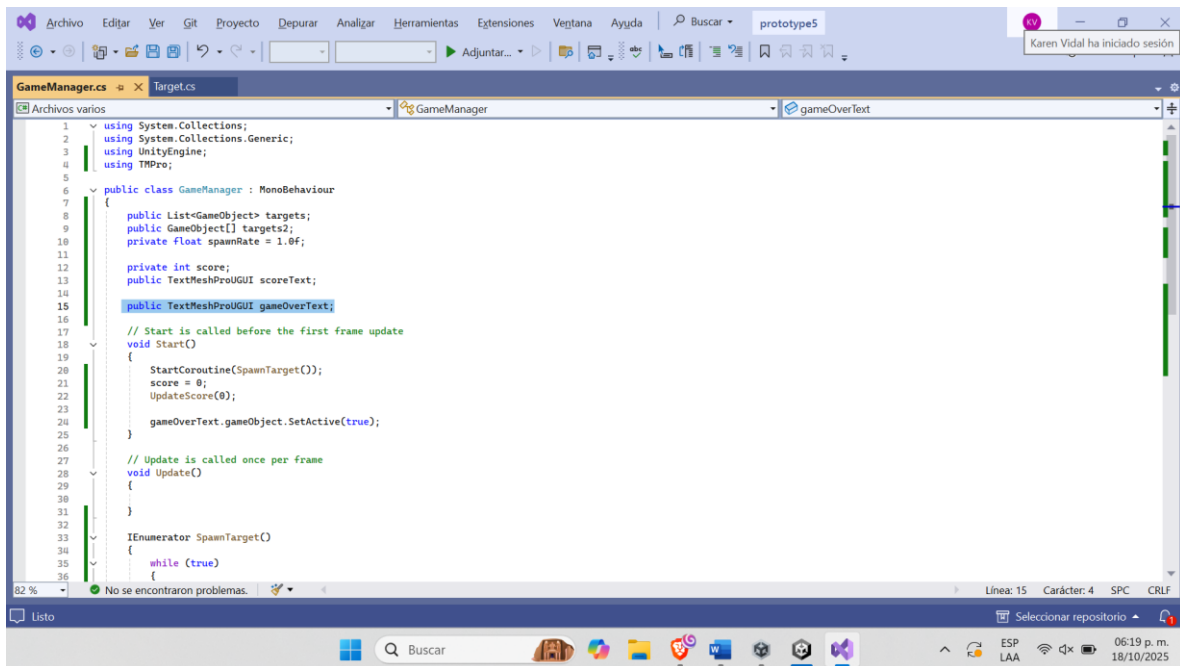

```
13 public TextMeshProUGUI scoreText;
14
15 // Start is called before the first frame update
16 void Start()
17 {
18     StartCoroutine(SpawnTarget());
19     score = 0;
20     UpdateScore(0);
21 }
22
23 // Update is called once per frame
24 void Update()
25 {
26 }
27
28 IEnumerator SpawnTarget()
29 {
30     while (true)
31     {
32         yield return new WaitForSeconds(spawnRate);
33         int index = Random.Range(0, targets.Count);
34         Instantiate(targets[index]);
35         UpdateScore(1);
36     }
37 }
38
39 private void UpdateScore(int scoreToAdd)
40 {
41     score += scoreToAdd;
42     scoreText.text = "Score:" + score;
43 }
44
45
46
47 }
```

Desafío 5 . Aplasta comida

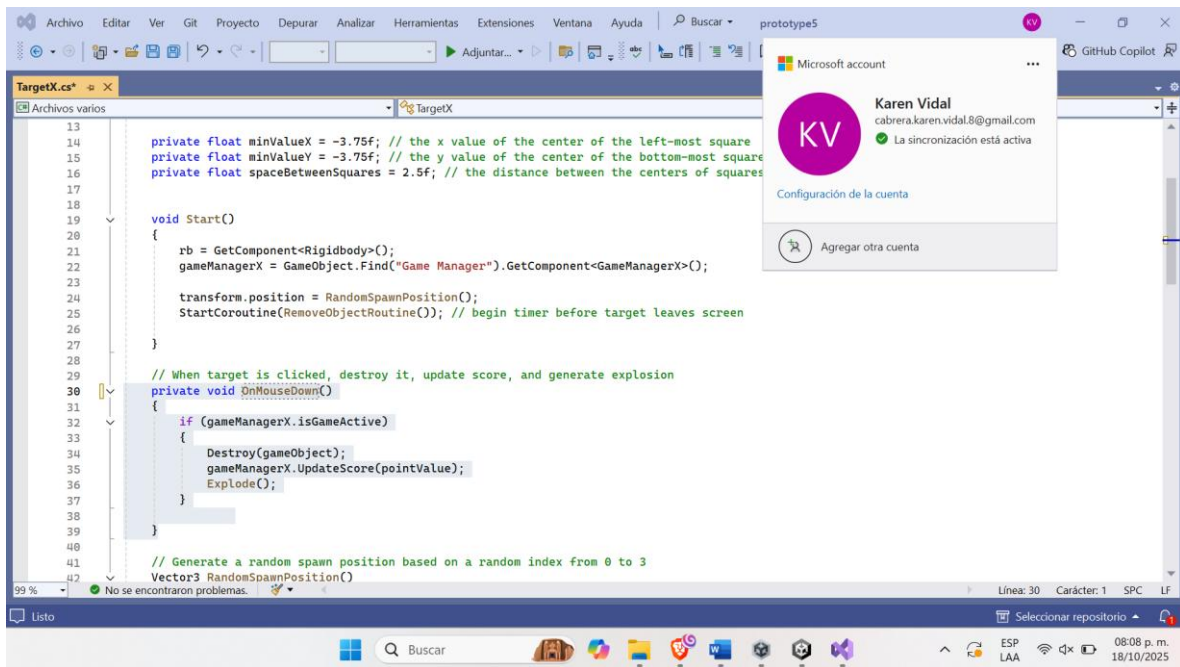

1. Importar el proyecto

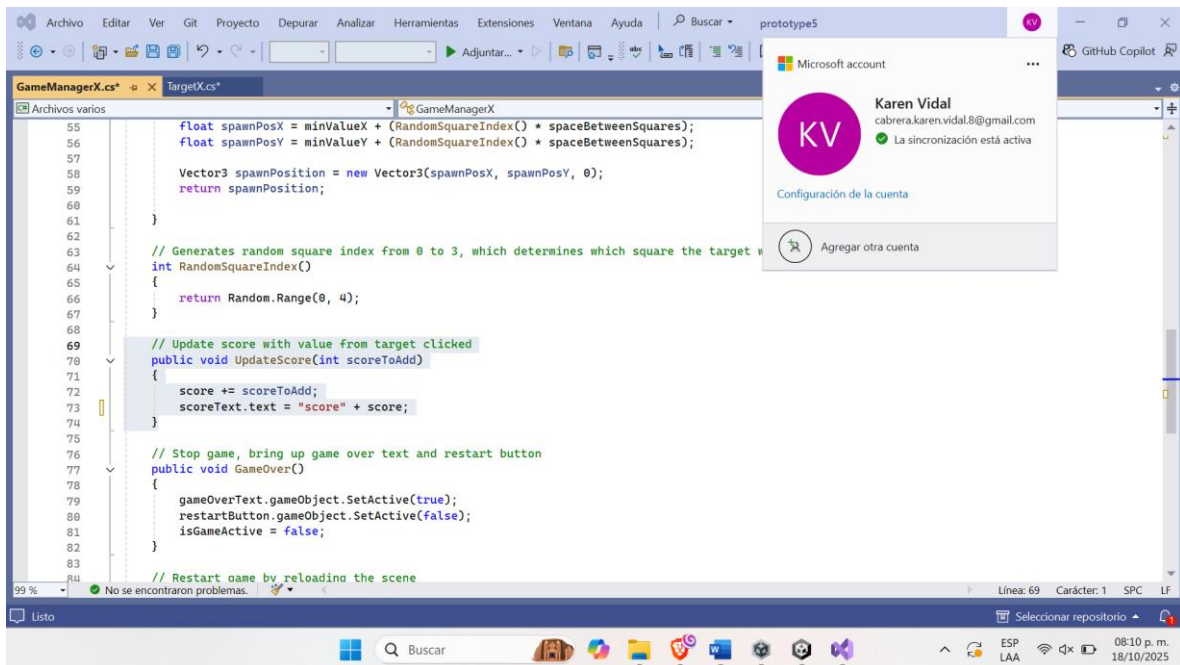

2. Los botones de dificultad se ven mal

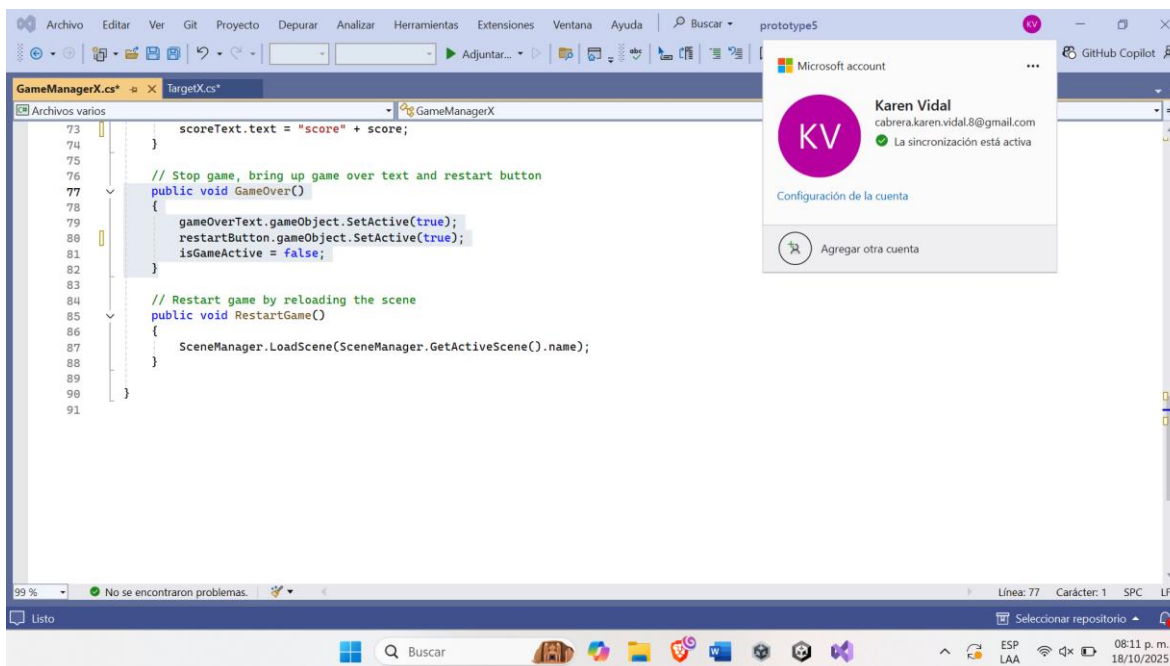

3. La comida se destruye demasiado rápido

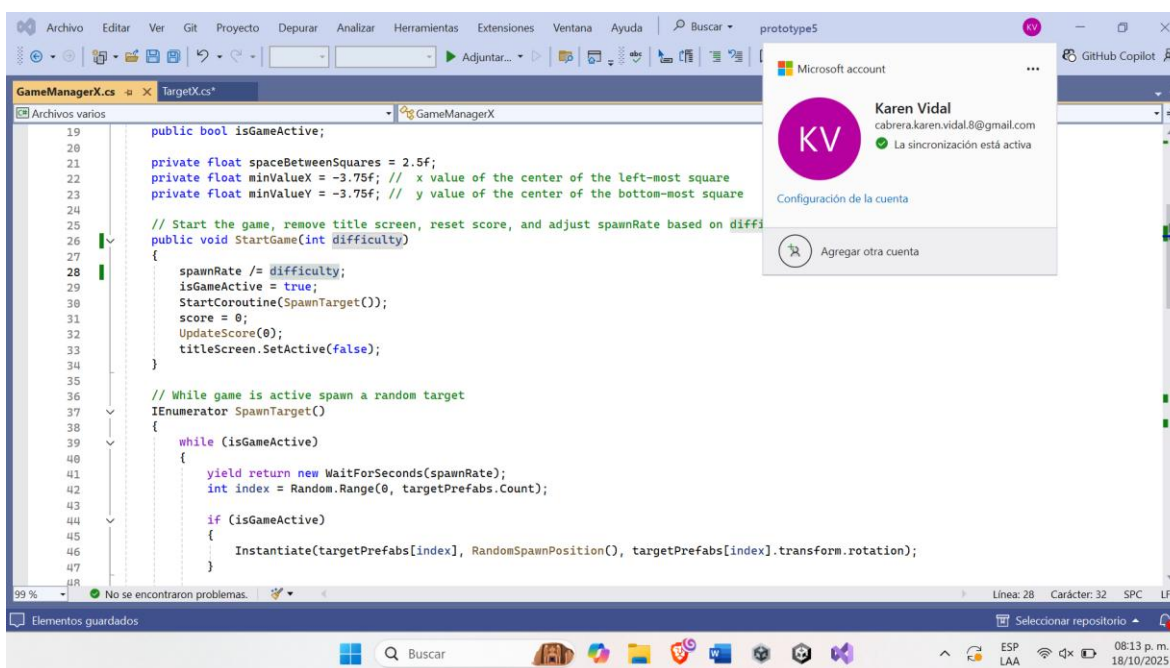

4. El puntaje se sobrescribe con la palabra «Score»

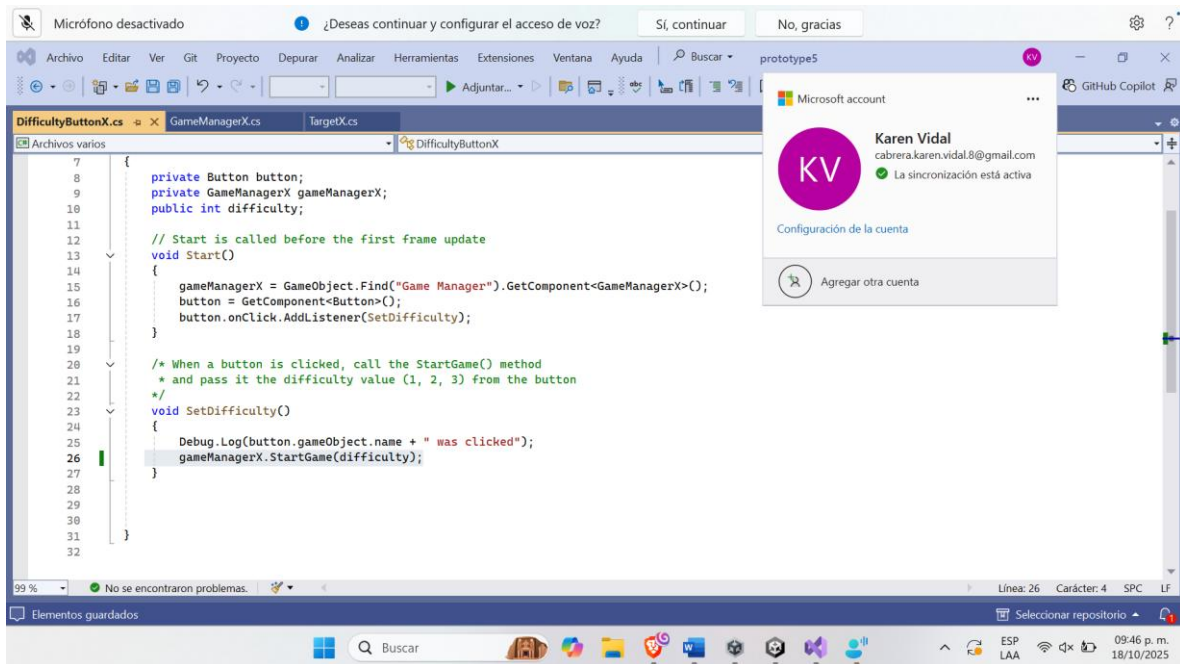

5. Tras perder, no hay forma de reiniciar

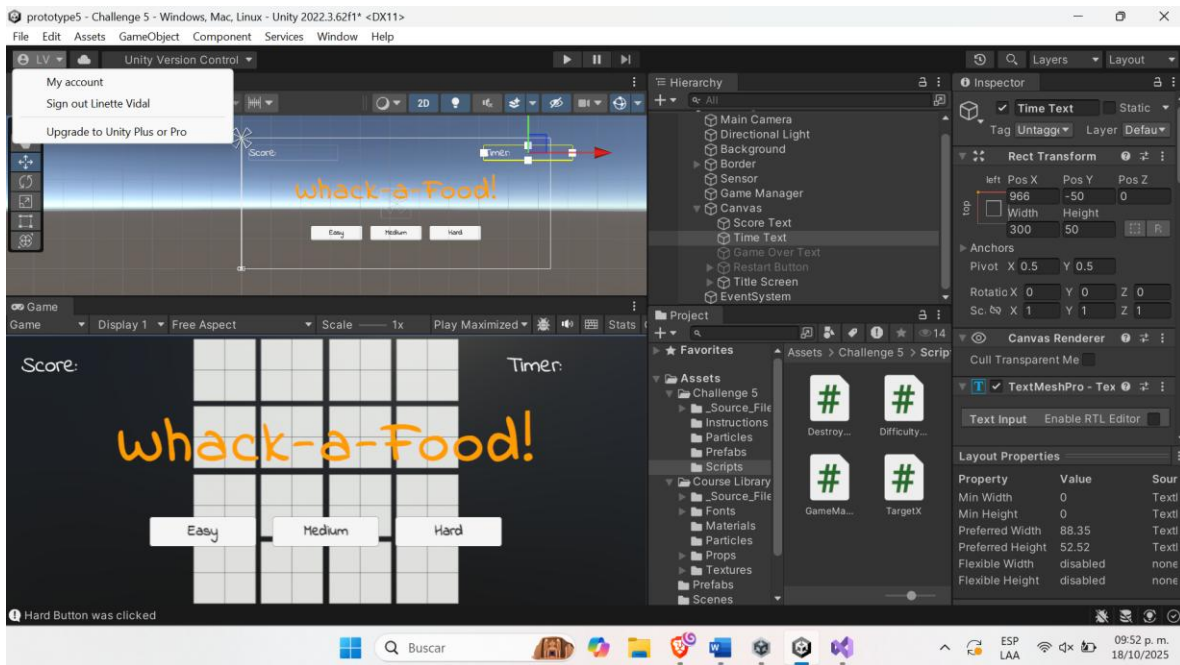

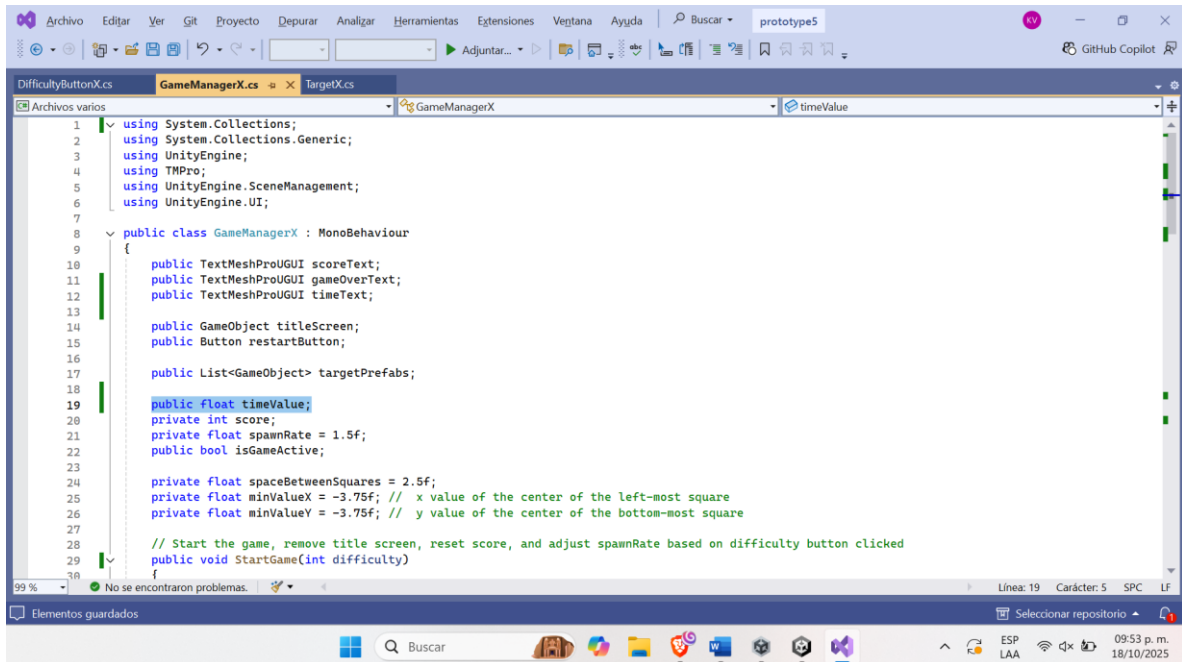

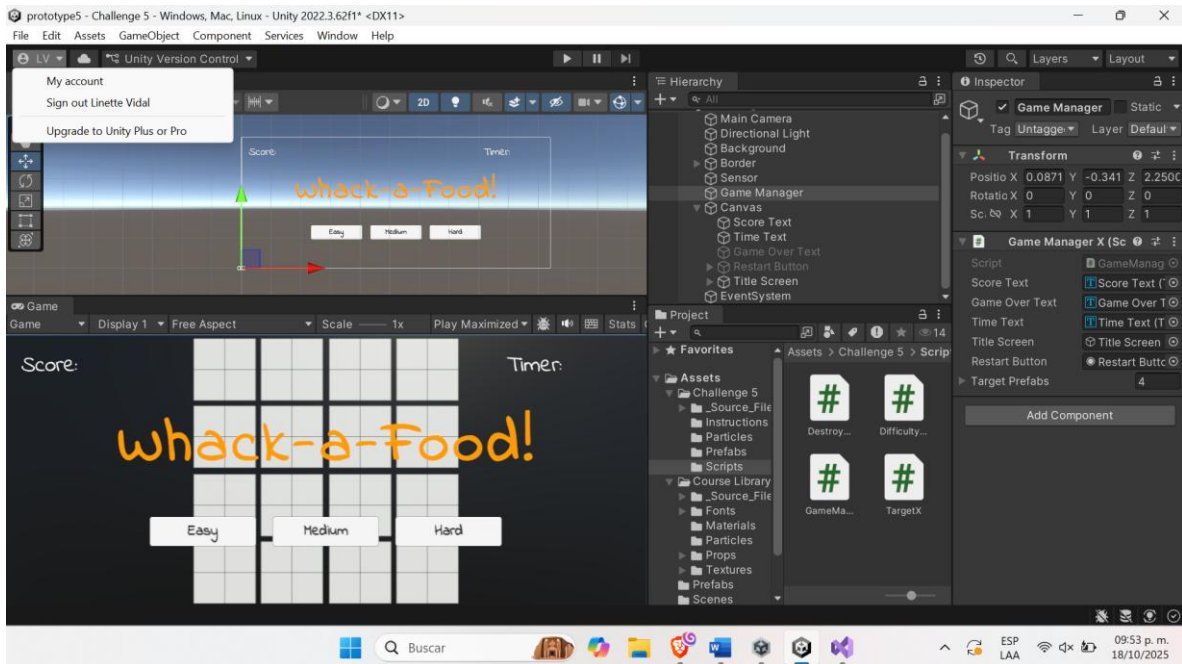

6. Los botones de dificultad

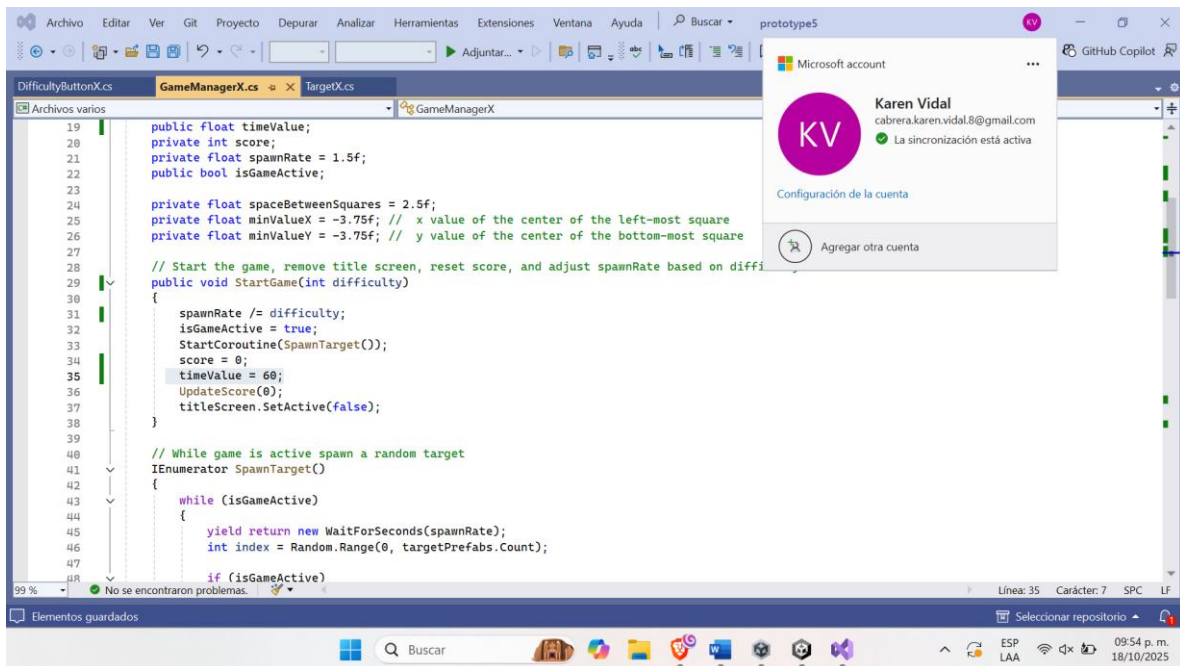

7. Extra: El juego no se detiene nunca

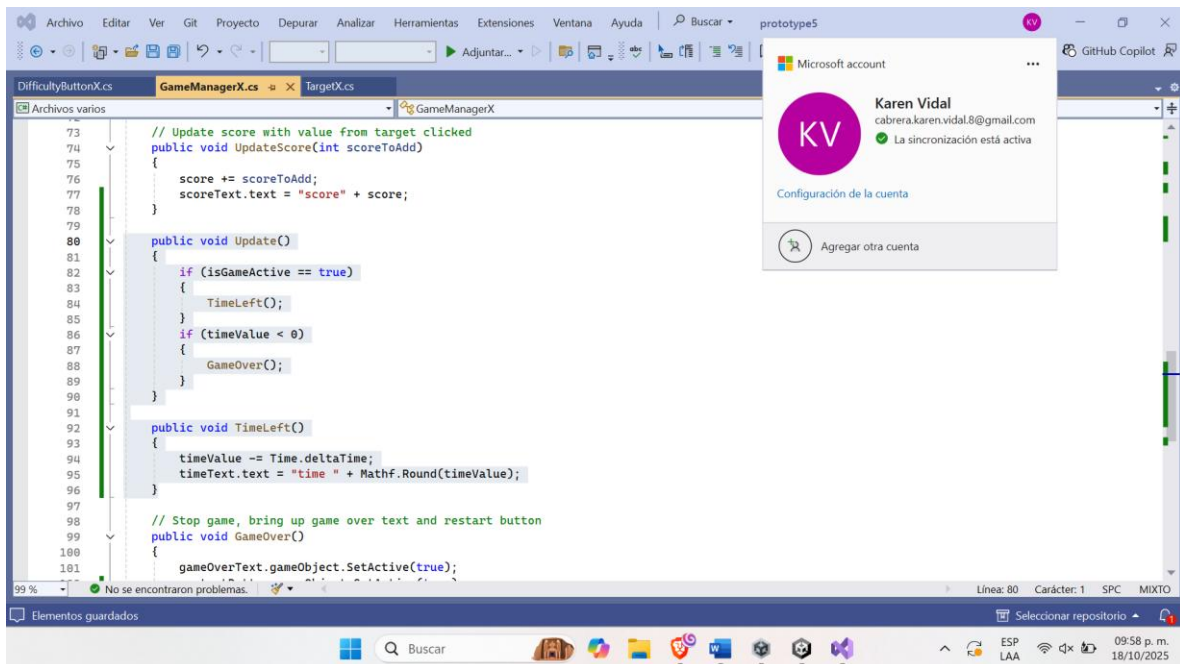

```
19 public float timeValue;
20 private int score;
21 private float spawnRate = 1.5f;
22 public bool isActive;
23
24 private float spaceBetweenSquares = 2.5f;
25 private float minValuex = -3.75f; // x value of the center of the left-most square
26 private float minValuY = -3.75f; // y value of the center of the bottom-most square
27
28 // Start the game, remove title screen, reset score, and adjust spawnRate based on difficulty
29 public void StartGame(int difficulty)
30 {
31     spawnRate /= difficulty;
32     isActive = true;
